SUMMARY

Software and AI engineer shipping production systems where mistakes are expensive. Agentic LLM applications and MCP agents in a regulated bank, on a JVM/Python background in high-load services for 2M+ customers. Outside the bank I build Seedfast, an AI-native data-generation product I founded: its generation core, its CLI and web app, and the distribution and its marketing processes. Focused on creating value, not just writing code.

Core stack: Python, TypeScript, Java/Kotlin, Go, Spring, React, PostgreSQL, Kafka, Docker, LLM agents, RAG, MCP.

Interests: playing music, table tennis and hackathons.

WORK EXPERIENCE

Solutions & AI Engineer, Slovenska Sporitelna, a.s.

Jul 2025 - Today

- Delivered a **six-figure cost reduction** by replacing a legacy workflow with an in-house **Kafka pipeline**, production-ready end-to-end from a one-page spec.
- Cut response times 85% for two high-load services serving **2M+ customers** by taking sole ownership of inherited services and driving targeted performance optimisations.
- Built **React** and **TypeScript** features for a large micro-frontend banking app on in-house UI libraries.
- Doubled feature delivery by **building a 3-person engineering team** from scratch, from role definitions to offers, plus code review and retrospectives.
- Mapped the credit-review workflow from scratch with analysts and process owners, then replaced its manual **multi-system lookup** with an AI agent that cross-references lending, collateral and limits.
- Got it approved for production in a regulated bank: a **Koog agent** sandboxed in its **own virtual filesystem**, reaching bank data only through a least-privilege, **auditable MCP tool layer**.
- Shipped **LLM pipelines** for automated credit-data validation and risk scoring.
- Worked with: Kotlin, Python, TypeScript, LangGraph, LangSmith, LangFuse, Ragas, RAG, LLMs, AI Coding tools, Spring, Apache Kafka, GitLab CI/CD, React, Koog, Azure OpenAI/Anthropic models, MCP

Founding Engineer, Seedfast

Oct 2025 - Today

- Built an AI system that generates **realistic, referentially correct data** for any database in **any locale** and **any domain**, sparing teams days of manual data engineering per dataset.
- More than **doubled output quality** on held-out data with **evaluation frameworks** and automated correctness checks that made a non-deterministic LLM pipeline measurable.
- Shipped the **Go CLI** and **MCP server** that let engineers and AI agents run Seedfast in production and CI, plus the runbooks and setup guides behind them.
- Own the web app's onboarding, lifecycle emails and free **Postgres tooling** in **TypeScript, React** and **Next.js**, with funnel analytics showing where new users stall.
- Take the demos and technical calls myself, and stay with each team until the product runs in their own environment, often debugging setups I can't see.
- Run the **containerised infrastructure** behind the product, including the CI that builds and distributes the CLI.
- Worked with: Python, Go, TypeScript, LangSmith, OpenAI models, MCP, Supabase, Docker, AWS, React, Next.js, GitHub Actions, Claude Code, Codex, OpenClaw, FastAPI

Software Engineer, The Designery s.r.o.

Apr 2025 - Jul 2025

- Built a **GDPR-compliant** backend from scratch on **Spring WebFlux** and **GCP** for a mental-health startup, encrypting patient data in real time with **zero unauthorised reads**.
- Took deploys from **12 minutes** to **4** with no downtime by automating the **GitLab CI/CD** pipeline, while leading a team of three developers.
- Worked with: Spring WebFlux, FastAPI, GCP (Firestore, Firebase Auth, Cloud Functions), Docker, GitLab CI/CD

Software Engineer, VitSBS

May 2024 - Oct 2024

- Halved document-certification time by automating equipment certification, and accelerated product decisions **~25%** with **GraalPy** trend analytics.
- Worked with: Spring, GraalVM/GraalPy, PostgreSQL, MongoDB, Vaadin, Docker, GitHub Actions

Backend Developer, ArenaPizza

Oct 2023 - Mar 2024

- Cut shift-approval time from **5 days** to **2** through schedule optimisation, on a secure Spring Boot REST API with OAuth2/JWT.
- Worked with: Spring Boot, OAuth2/JWT, PostgreSQL, Redis, Maven, GitHub Actions

EDUCATION AND LANGUAGES

Bachelor of Computer Science - Technical University of Kosice

Languages: English (C1, IELTS Academic 8.0/9), Slovak, Czech, Russian, Belarusian.
